Summary

Shopify technical lead, currently CTO at Digitdeck, an ecommerce agency. I own Shopify engineering across 18+ client storefronts and a production app suite: classic Liquid themes, React storefront architectures, and multi-tenant apps on Shopify's official Remix stack — the same React/Remix foundation Hydrogen is built on. I set the standards, review everything that ships, and build the delivery system itself: component libraries, automated QA, CI/CD, and AI-agent tooling.

Skills

- **Shopify:** Liquid, Online Store 2.0, Theme Blocks, metaobjects/metafields, Admin & Storefront GraphQL APIs, Shopify CLI, embedded apps (Remix framework), Shopify Functions, Web Pixels, Theme App Extensions, App Proxy, webhooks, OAuth, Billing API, store migrations
- **Frontend:** React, Remix, Next.js, Vite, Tailwind CSS, GSAP, Framer Motion, responsive UI, accessibility
- **Backend:** Node.js, JavaScript/TypeScript, Prisma, PostgreSQL, Redis, BullMQ, REST & GraphQL API design, multi-tenant architecture
- **Testing & CI/CD:** Playwright, Vitest, GitHub Actions, Lighthouse / Core Web Vitals
- **CRO & analytics:** A/B testing (Bayesian statistics, SRM detection), first-party event instrumentation, AOV and funnel optimization
- **AI engineering:** Claude Code, Codex, Kimi, Traycer; multi-agent orchestration, MCP, agent evaluation suites

Experience

CTO & SHOPIFY TECHNICAL LEAD — DIGITDECK

Remote (Medellín, CO) · Jun 2024 – Present

- **Technical leadership:** Set the Shopify engineering standard for the agency — a 91-standard playbook, code review on every change, and an issue-based QA workflow with visual evidence — leading a developer plus AI-agent teams.

- **Storefront architecture:** Standardized a hybrid Liquid + React islands architecture (Vite, Tailwind CSS) with a 33-component shared library and a design-token system spanning 14 brands; pixel-faithful Figma/Framer builds.
- **Migrations:** Led WooCommerce-to-Shopify and staging-to-production store migrations, and re-platformed an 11,000-line monolithic Liquid theme into React islands with verified visual parity — now live in production.
- **Shopify apps:** Built a multi-tenant app suite on Shopify's official Remix framework — A/B testing, reviews, bundles, referrals, back-in-stock, and a subscription billing engine (800+ automated tests) — including a recurring-billing integration live in production managing 581 subscriptions.
- **Extensions & APIs:** Shipped Shopify Functions (TypeScript compiled to WASM), a consent-gated Web Pixel, and Theme App Extensions; deep Admin GraphQL work including bulk catalog i18n for a bilingual, dual-currency storefront.
- **Platform engineering:** Architected the agency's multi-tenant operations platform (Remix, Prisma/PostgreSQL, BullMQ — live at app.digitdeck.co) with RBAC and a pre-launch security audit that fixed 16 vulnerabilities.
- **CI/CD & QA:** Built GitHub Actions pipelines for themes and apps (test matrices, merge gates, live-theme backups, staging-first deployments) plus a Playwright harness that behaviorally tests entire storefronts, with 40+ automated checks for Shopify-specific failure modes.
- **CRO & experimentation:** Researched 59 DTC brands into a 70-pattern conversion library; authored the agency's A/B testing methodology (Bayesian statistics, SRM detection) and instrumented first-party analytics across 8 stores.
- **AI-driven delivery:** Designed the agency's multi-agent development system on Claude Code and Codex — semantic task routing, a shared knowledge base, and evaluation suites — the leverage that lets a two-person team ship at full-agency scale.

Lead Shopify Developer — Ellamau (*Nov 2025 – Jan 2026*): Full Shopify storefront build — modular Liquid components, 15+ responsive templates, 90+ Lighthouse scores.

Full Stack Developer — ABI Data (*Feb 2025 – Oct 2025*): Enterprise newsletter platform (10,000+ contacts); React editor cut campaign creation time 40%; owned the REST APIs.

Frontend Developer — RH (*Feb 2024 – Jan 2025*): Enterprise CMS migration (Adobe AEM to Contentful); Lighthouse ~70 to 95+; cut operational costs \$45,000/year.

Frontend Developer (Shopify) — Digitdeck (*Feb 2023 – Jan 2024*): Built and optimized Shopify storefronts: 10–20% higher conversion, 30–40% faster loads.

Earlier: Salesforce Developer — Orthofix (2022) | Frontend React Developer — iBox SA (2022)

Education: EAFIT University — Software Engineering (2023 – Present) | **Languages:** Spanish (native), English (C1 — IELTS)
